

## Press release Calendar Week 43/I

### Energy revolution? Rameder's project for years! Own solar power station has saved almost 320 t of CO<sub>2</sub>

Renewable energies: what has been talked about since the nuclear disaster at Fukushima in March 2011 more and more worldwide, **Rameder** has used for quite some time. When taking the decision to do more for environmental protection, the German company opted for building a solar power plant, the ideal site of which turned out to be the company's own warehouse in Munschwitz. The 1,600 m<sup>2</sup> plant, with 1,076 thin-film modules and nine inverters, connected by eleven km of wire, was put on stream on 10 June 2010.

As of October 2016, this solar power plant operated by **Rameder**, today Europe's largest provider of automotive transport solutions, has already reduced the company's CO<sub>2</sub> footprint by no less than 320 t. Okay, a tonne of CO<sub>2</sub> is something hard to visualise, but it is the amount emitted by a car driving a distance of 4,900 km at an average consumption of fuel of 8.5l. This distance is more or less that from Berlin to Madrid.

But **Rameder's** portfolio can also help to reduce ecologically unsound footprints. After all, only in the holiday season are large passenger cars really fully loaded. So why not opt for a smaller car for other trips, save fuel and reduce your CO<sub>2</sub> emissions into the bargain? If needed, **Rameder's** versatile and flexible transport solutions will provide more space. Be it a towbar, roof box or bike carrier, Europe's leading provider of automotive transport solutions has it all available in its online shop at [www.rameder.eu](http://www.rameder.eu).
