Towbars for Nissan Leaf and Peugeot 5008 from Rameder

The Nissan Leaf is considered the first mass-produced electric car. The consistent popularity among friends of alternative drive technology now led to the second generation on the market. Somewhat more conservative but extremely flexible is the Peugeot 5008 II. Grown from a compact van to a practical SUV, the French-made vehicle is now available fitted with either gasoline or diesel engine. What connects the two is the ability to retrofit a towbar from Rameder. The market leader in this field, the company offers a vast selection of different products coming from well-known manufacturers.

With over 340,000 built vehicles, the Nissan Leaf is more than a marginal phenomenon. The compact electric car has firmly established itself as an urban all-rounder. But even here **Rameder** can bring new potential to light. Its online shop at www.rameder.eu offers the matching detachable towbar as a complete set for 398 Euro. However, the Nissan Leaf has no registered towing capacity. But the clever hook is ideally suited for attaching bike carriers. This also transports e-bikes without any problems and thus perfectly completes the electric mobility concept. Search in the [theme world](#) for a large selection of different models.

The sufficiently large assortment offered by **Rameder** also contains other products suitable for Nissan Leaf. Such as the [Tema roof rack](#), available at a price of 105 Euro. With it, the urban electric car can also accommodate skis and bike carriers without problems.

The Peugeot 5008 II is versatile from the moment it leaves the manufacturers plant. For the French-made SUV, **Rameder** offers both a rigid and a detachable towbar. The rigid complete set coming from the brand manufacturer is available for a price of 201 Euro and pulls up to 2000 kg with a vertical load of 100 kg. In addition to bike carriers, the trailer towbar supports many other different trailers. All the matching products from the **Rameder** range are displayed after clicking on "[Everything for your car](#)" and entering the vehicle data, making compatible roof racks or bicycle racks to come forth.
